

How to protect your social media accounts

Snapchat

Snapchat is today one of the most popular and widely used apps all over the world. A lot of young adults and teenagers depend on it for sharing details of their daily lives, or calling and keeping in touch with each other. That's why protecting your Snapchat account is so important – you're protecting your privacy and confidential data.

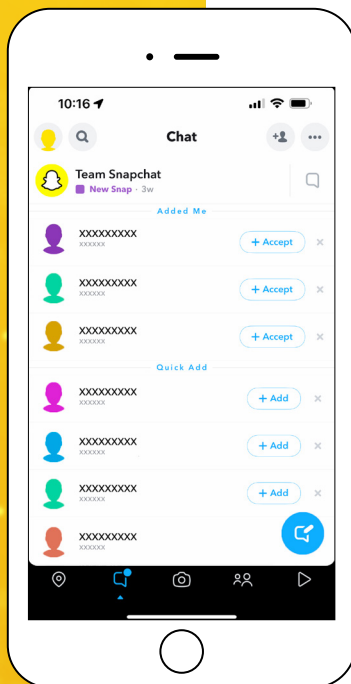

ALQST's Digital Rights Unit

in collaboration with Digital Protection, has put together some useful and effective tips to help you protect your accounts.

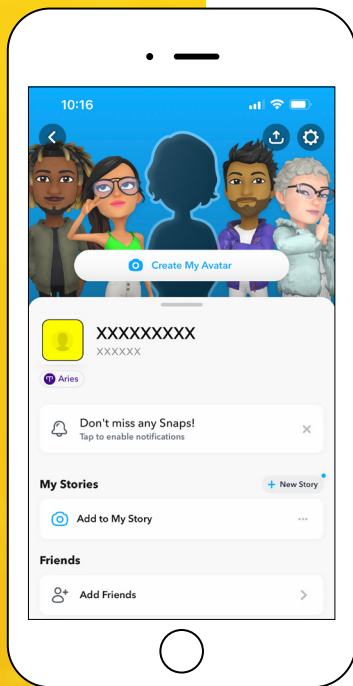

How to add

two-factor authentication

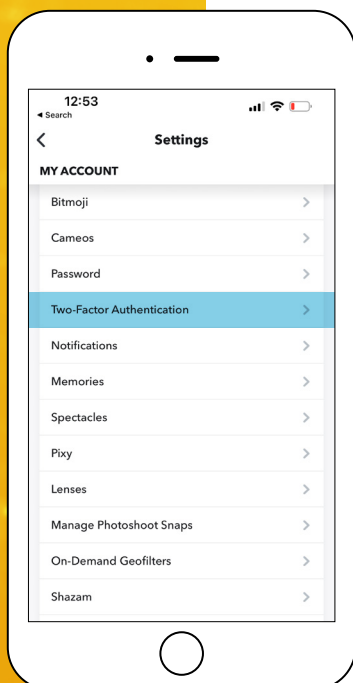

Step 1:

Click on your profile picture.

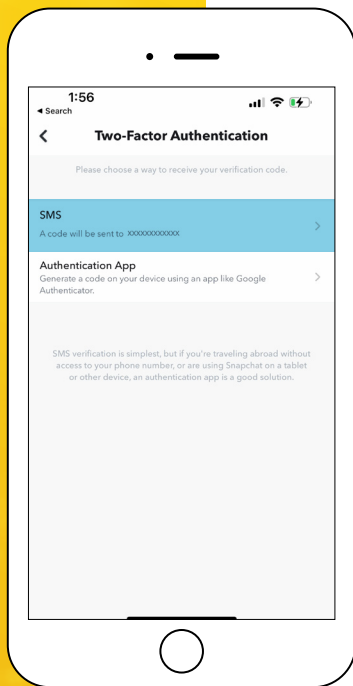

Step 2:

Go to Settings. ⚙️

Step 3:

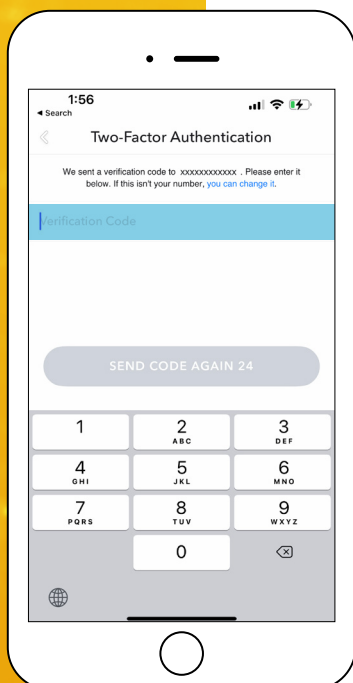

Click on “Two-Factor Authentication”.

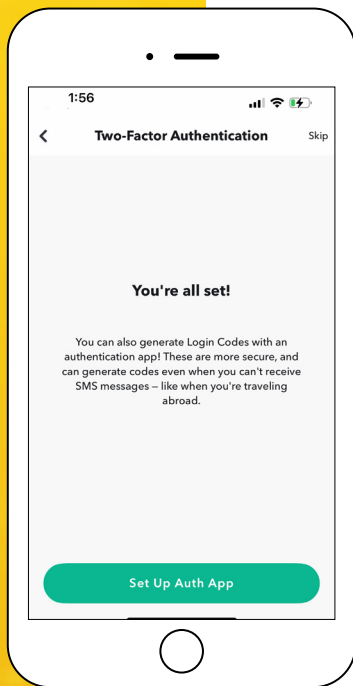

Step 4:

Select the feature you want to activate.

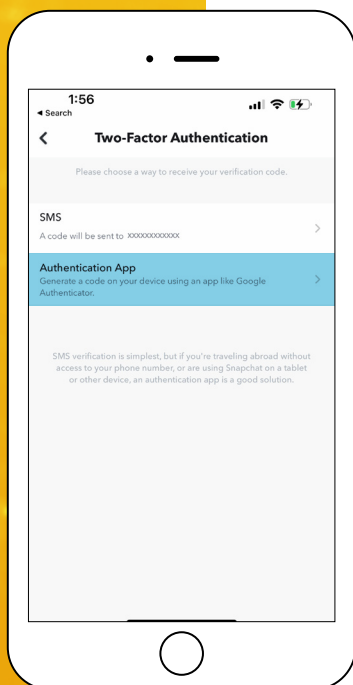

a – To activate “SMS or Text”, if the app is linked to a mobile phone:

You will receive a code on your mobile phone via text message- insert it.

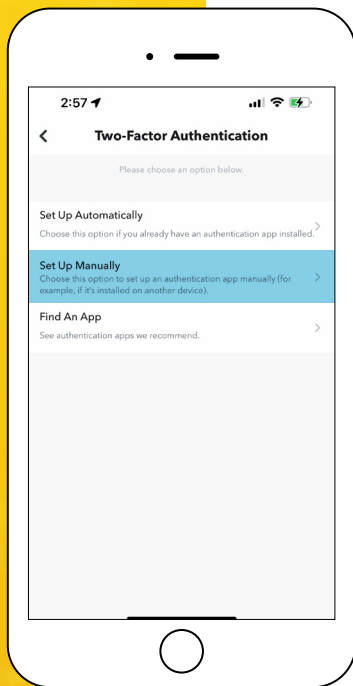

After entering the code, the phone's security service will be activated.

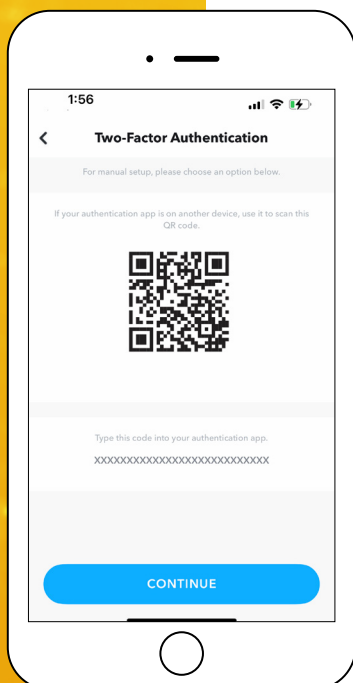

b – To activate the “Authentication App” option:

This is more effective, especially if you travel abroad a lot, or if you don't want to link Snapchat to your mobile phone number.

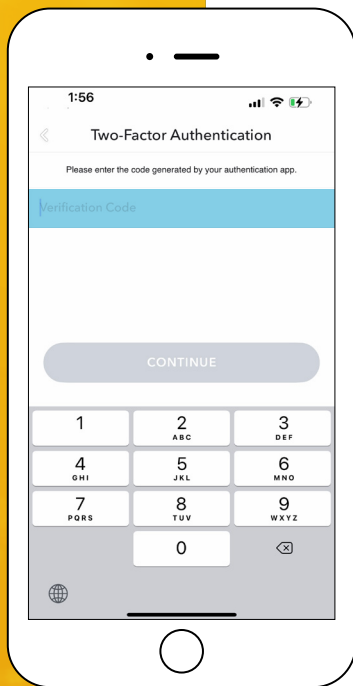

First make sure you have downloaded an app to help activate this feature, such as DUE or Google Authenticator.

If the verification application is located on another phone, choose the manual activation feature as shown in the picture.

This will appear on your screen. Scan the QR code with the camera on another device, after which a link will appear that you need to click on.

Enter the code that will appear in the verification application in the box.

As soon as you have verified the passcode, the authentication method immediately takes effect to protect your account.
